

CLOUD EMAIL FIREWALL

Secure incoming and outgoing email with powerful multi-layered protection and customizable, fine-grained control

MUITI-I AYER **PROTECTION**

CUSTOMIZABLE

BUSINESS CONTINUITY

COMPLIANT

Email is the easiest and most cost-effective vector used by cyber attackers to compromise organizations' users and assets. Phishing and spear phishing attacks prey on human curiosity. Business email compromise (BEC) attacks try to impersonate executives, company leaders, and corporate domains. Any incoming email can contain malware, and high volumes of spam email barrage companies daily, wasting precious server and administrative resources.

Spamina Cloud Email Firewall is a secure email gateway that transparently detects, blocks, and simplifies management of email-based cyber threats and spam. A powerful, multi-layer firewall, Spamina Cloud Email Firewall is scalable, fault tolerant, and ideal for companies with mailboxes in the cloud or on premises. Advanced capabilities defend against incoming and outgoing email-based threats and protect your organization's reputation.

KEY BENEFITS

Secure Incoming and Outgoing Email **Cost-Effectively**

- Gain multi-layer connection, antivirus, reputation, content, and proprietary Simile fingerprint-based filtering in a single, highly flexible email firewall
- Detect and block threats across multiple vectors. including business email compromise and impersonation
- Enforce TLS connection to ensure private communication
- Support DMARC, DKIM, and SPF
- Block all spam in the cloud to prevent it from reaching users

Ensure Email Continuity

- Automatically store all incoming mail in cloud for up to 5
- Retain email, including list messages and spam, for up to
- Enable users to continue working during email server downtime via Webmail

Customize Quickly and Easily

- Define general policies and implement fine-grained policies with no impact to users
- Tailor policies by message attributes, content, usage
- Choose to reject, redirect, inspect, or block messages and attachments
- Enable users to easily manage their own email and access preferences
- Add additional capabilities, such as data leak prevention, encryption, archiving, and threat prevention, with a click

Seamless Integration

- Automate user registration and synchronization
- Synchronize user and distribution lists between Microsoft Active Directory and the cloud
- Full IPv6 support
- Interoperable with Microsoft Office 365 and Google Mail

Filters Inbound and Outbound Email

Protect users from incoming email-based threats, and preserve your company's reputation by ensuring authenticity of outbound messages.

Ensure Email Security

Add a layer of security to email traffic and additional security features for Office 365 and Google Mail. Further strengthen your security posture with Spamina antivirus, anti-malware, and Advanced Threat Protection (ATP) modules.

Prevent Identity Theft and Impersonation

Ensure that email is sent only from authorized servers and that traffic is delivered over a secure channel with integrity guaranteed by Domain Keys Identified Mail (DKIM). Identify and stop incoming email that supposedly comes from your users or those using homophones and look-alike domains.

Made in Europe

Our data centers have deep knowledge of region-specific data requirements and risks. We operate in areas where your data privacy is legally protected from third parties.

EXTEND A POWERFUL RANGE OF PROTECTION

Spamina Cloud Email Firewall is built on a multi-layer filtering architecture designed to deliver outstanding effectiveness and reliability for inbound and outbound email traffic. It combines connection, antivirus, reputation, and content filtering to detect and block threats originating from multiple threat vectors, including spammers, phishing, Directory Harvest Attack (DHA), viruses, and other forms of malware.

Spamina protects against socially engineered email attacks designed to deceive users into revealing sensitive data. Spamina Cloud Email Firewall scans all inbound email and inspects headers, domain details, and content to identify—and stop—BEC messages attempting to impersonate the company's executives.

STOP SPAM IN BOTH DIRECTIONS

Spamina enables you to cost-effectively manage incoming and outgoing email in one solution. It separates incoming automatic bulk mailings from legitimate corporate email using advanced analysis techniques. It blocks all spam in the cloud, with fewer than one in 1M false positives. Spamina Cloud Email Firewall supports Domain-based Message Authentication, Reporting & Conformance (DMARC), DKIM, and Sender Policy Framework (SPF) protocols. Spamina preserves your organization's online reputation by filtering sent email. Outbound email is scanned and analyzed to prevent it from being used for spamming and to ensure that it does not contain malware.

DEFEND AGAINST IMPERSONATION

Spamina combines multiple techniques and tools that detect attempts to impersonate your organization in outgoing email. You can publish strict SPF records and automatically and transparently sign any outgoing traffic with DKIM, register your IP addresses to prevent spoofing, and even enforce strict matches between header and envelope addresses. Further defend again suspicious spoofed email with Spamina ATP.

EASILY CUSTOMIZABLE CAPABILITIES

Spamina Cloud Email Firewall provides a powerful rules engine that allows you to set policy for inbound and outbound email. Define and set general policies and configurations and then implement fine-grained policies as needed—even down to specific users. Policies can be based on message attributes or content and deployed with no impact to users. The cloud service can reject emails, redirect messages, block outgoing mail, inspect and add headers, take action according to MIME attachments, and enforce TLS connections to ensure privacy.

Support distribution lists, including both addresses protected by the service and external addresses, such as @gmail.com. Open lists to any sender or limit lists as needed.

About Spamina

Spamina provides innovative enterprise solutions in the areas of Threat Prevention, Data Governance and Secure Collaboration. Our cloud services offer customers a safe communication environment where business continuity, service scalability and cost-effectiveness are ensured. Headquartered in Madrid (Spain), Spamina serves customers in more than 50 countries, supported by a network of authorized partners.

For more information:

PRESERVE EMAIL—AND BUSINESS—CONTINUITY

Spamina Cloud Email Firewall email service continuity ensures that email is always accessible, from anywhere. Incoming email is automatically stored for up to five days, enabling easy retrieval if users accidentally delete a message. Retain all email, including list messages and spam, for up to 28 days. With Webmail access, users can keep working even during email server downtime.

SIMPLIFIED MANAGEMENT

The Cloud Email Firewall console unifies firewall administration under a single pane of glass. Fast, easy policy deployment saves time. Manage user and domain aliases, passwords, and filtering levels—or enable users to manage their own messages. Define "allowed" and "blocked" domains globally. Spamina delivers statistics on all email traffic and customized reporting for each domain under protection. The Spamina Notifier tool alerts users when they receive spam.

INTEGRATE AND SYNCHRONIZE SEAMLESSLY

Spamina Cloud Email Firewall integrates seamlessly with Microsoft Exchange, Office 365, Google Mail, Zimbra, and SMTP standard-compliant email platforms. It provides an ideal anti-malware, anti-spam, and smart host outgoing mail gateway for Office 365 and offers full IPv6 support. Automate user registration and synchronization with Lightweight Directory Access Protocol (LDAP) or Simple Mail Transfer Protocol (SMTP). Easily synchronize lists by pushing updates in your Active Directory user base to the cloud and distribution lists.

REPORT AND RESPOND

Review logs of all email and search logs by almost any criteria—subject, to/from, date range, classification (spam/valid/mailing lists), and others. Logs can be exported from the console itself or be integrated with a SIEM using the Spamina web API.

EXTEND THE BENEFITS

Spamina delivers cost-effective, powerful protection and flexibility in a single, holistic platform. Integrate other Spamina Cloud Email solutions with just a click to extend protection for instant messaging, data leak prevention, encryption, archiving, threat prevention, and compliance reporting. Manage everything in a single pane of glass.
